December 21, 2009

Gene Baker and I are proud to tell you that Telecast Fiber Systems has been acquired by Belden Inc. This is a great step for Telecast and for our customers, as it combines the strengths of two of the most recognizable brands in video and audio communications.

Belden is the world leader in cable and wireless signal transmission and connectivity solutions for a wide range of markets and industries, with a strong position in broadcast. And over the past 18 years you have come to know Telecast as the leader in fiber optic systems for television broadcast production and other demanding video applications.

Bringing our two companies together will help you capitalize on your continuing need for mixed copper and fiber solutions and growing bandwidth demands in "live entertainment" applications. Because you demand high quality, speed and ease of use in your signal transmission technologies, you can count on Belden and Telecast to provide a complete copper-to-fiber architecture to help easily and cost effectively deliver maximum performance in broadcast applications through lighter cable runs, expanded camera performance and faster deployment.

Belden has manufacturing, sales and marketing presence around the world. Together we are committed to delivering you best-in-class innovation, quality and service. Both Gene and I are excited to be continuing with the new Telecast, and we look forward to a very smooth transition. We want to assure you that serving you with our full portfolio of high-quality products and services will continue to be our top priority.

Thank you for your continued support. If you have any questions, please contact or call either Gene or myself.

Our best regards,
